

Intelligent Buildings

Specialist Intelligent Buildings Services for the Technologies Sector

TClarke

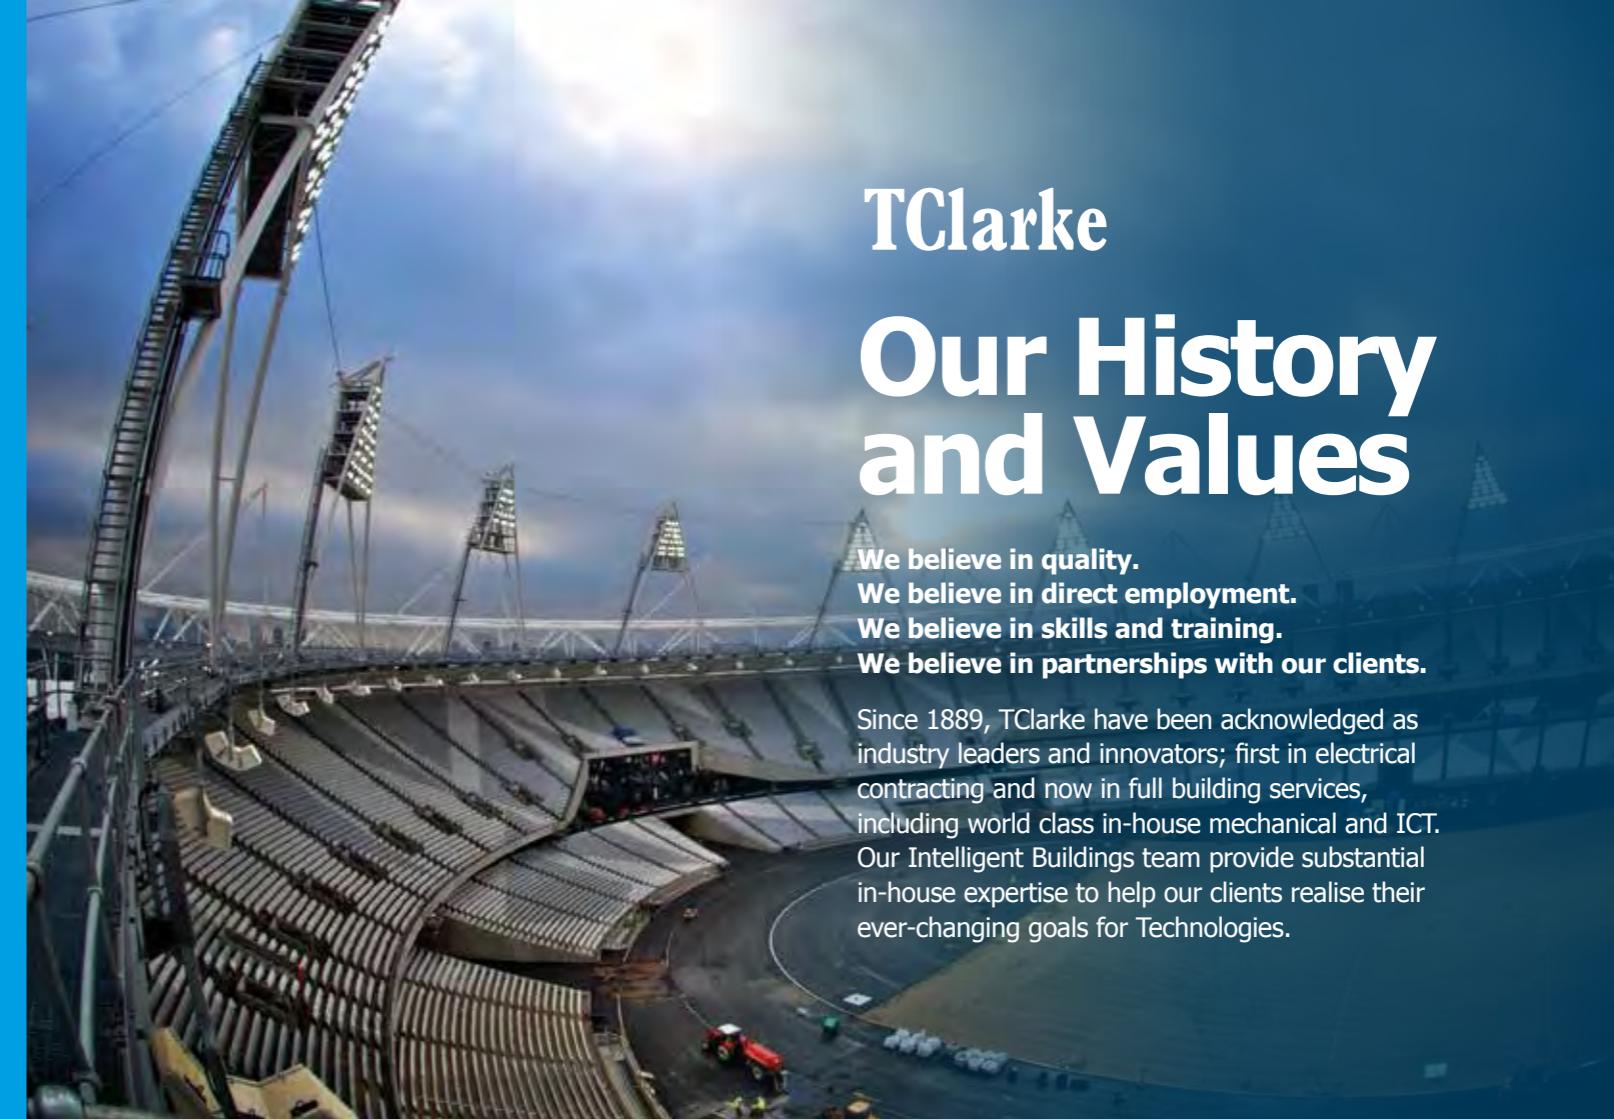

'TClarke's technical ability to deliver major projects in London is without question. As a result of the hard work the TClarke team at 22 Bishopsgate has undertaken, the common network is not only fully designed, integrated and status A before starting on site but installed to a high standard throughout for a developer that is very demanding and forward thinking.'

This, in my experience has been the best team I have worked with in delivering structure cabling and active networks.'

**Alan Williamson
M&E Manager,
22 Bishopsgate Project**

Our Reputation

We deliver world class Intelligent Building Solutions for the largest construction projects and Data Centres across the UK. Our history and experience of delivering a full range of Building Services enhances our understanding and expertise of Intelligent Buildings, making us a market leader like no other in our field.

Getting it Right

Sound strategy and design, are the foundation of an effective Intelligent Building.

Our in-house design capabilities & expertise means that our clients investment in Technologies delivers real world value, reduced operational costs, increased productivity, and improved wellbeing

Innovation

Innovation is at the heart of what we do, we undertake extensive testing on new Technologies with the world's leading manufacturers, so you don't have to.

Integration

We are experts in Integration, we look beyond the independent building systems, and treat them as connected and responsive devices, which interact with building operators and occupants to give them new levels of visibility, safety, and actionable information to optimise building performance.

- Improve employee wellbeing
- Reduce your energy consumption
- Make your workspace flexible
- Reduce your environmental impact
- Protect your people and your building

Control

We deliver the best in Automation, Visualization, and Operational Management Solutions.

Our advanced Analytical Software unleashes the hidden value of your data and puts the control of your building firmly in your hands.

Great Clients: Deep Relationships

'I worked with the Intelligent Buildings team in achieving a successful handover on a challenging refurbishment project. Their input and collaboration in working with the consultants to assist with the final close out of client design requirements was excellent, providing advice to ensure the architectural vision and intent were met, whilst maintaining security and access control compliance.'
